Hormone Replacement Therapy

Hormone Pellet Therapy Procedure

- **What are bio-identical hormone pellets?**
  - Biologically identical hormones have been approved and available in the US since the 1930's. The use of these hormones has been slow to increase despite scientific research showing that bio-identical hormone use is far superior to using non-human hormones. We now have the ability to place time-release pellets of approved human hormones in the fat under the skin to deliver more youthful levels of hormones. The hormone is absorbed slowly and steadily for months following placement. While this is not a “fountain of youth”, it can dramatically improve many people's quality of life and overall health in measurable ways. These findings are also supported by hundreds of recent scientific studies.
- **What Are The Goals Of BHT?**
  - Alleviate symptoms caused by decreased hormone production, such as-sleep problems, mood swings, increased body fat, decreased libido and sexual function, hot flashes, night sweats, anxiety, etc.
  - Re-establish the protective benefits of hormones, including bone density, cardiovascular health, immune function, balance, etc.
  - Reversal of diseases traditionally associated with aging, like osteoporosis, loss of strength, fatigue, exercise intolerance, decreasing muscle mass, mental clarity, etc.
  - Enhance the enjoyment, sense of well-being, and quality of life over the long term
- **You will need to have complete physical exam and bloodwork to see if you qualify. We will be looking at your medical records if you have them**
- **Call about our packages**

Men's Testosterone Therapy

- **Men can also get pellets however it maybe more cost effective for injections**
- **Low T symptoms**
  - Men naturally start losing some of their testosterone when they hit their 30s or 40s. A more rapid decline in testosterone levels may indicate a problem called low testosterone (low T). Common symptoms of low T include:

Erectile Dysfunction (ED)	Changes in sex drive	Decreased sperm count
Depression or anxiety	Weight gain	Hot flashes

Some men may also have changes in the size of their penis and testicles. Others may have breast swelling.

  - See if you qualify based on symptoms and bloodwork. Testosterone injections are FDA approved and insurance may cover if your meet criteria

Disclaimer* Not FDA approved and not covered by insurance
